1) While the relative strength criterion ensures that investments are made in line with the trend direction, the momentum, on the other hand, is intended to indicate a possible trend reversal at an early stage. This combined approach is shown in an easy-to-understand four-quadrant chart. The upper right quadrant contains so-called «trend followers», i.e. stocks that currently have both a clear trend direction (i.e. a relative strength greater than one), and a momentum greater than one.
